Rotary self-ligating brackets are an advanced type of self-ligating orthodontic brackets featuring a rotary or rotating-sliding locking mechanism. This design allows the built-in clip or cover to open and close through a rotational motion, enabling the archwire to be secured without the need for traditional ligatures. These brackets reduce friction, improve treatment efficiency, and offer enhanced ease of use compared to conventional ligated or sliding-door self-ligating brackets. They are commonly used in modern high-efficiency orthodontic systems.
