The scorch retarder is a substance that prevents the rubber compound from producing an early vulcanization phenomenon during processing. Generally including nitroso compounds (such as N-nitrosodiphenylamine, etc.), Organic acids (such as benzoic acid, phthalic anhydride, etc.) and thioimines (such as N-cyclohexyl thiophthalimide).

Rubber is a kind of polymer material with high elasticity, insulation, air tightness, oil resistance, high temperature or low temperature resistance, which is widely used in industry and agriculture, national defense, transportation and daily life. Depending on the source, rubber can be divided into natural rubber and synthetic rubber two categories. In 2022, the global natural rubber production is about 15 million tons, Thailand's natural rubber production accounts for 34% of the world, and China's natural rubber consumption accounts for 42% of the world. Global synthetic rubber production exceeds 20 million tons, China's synthetic rubber production accounts for 36% of the world, and China's synthetic rubber consumption accounts for 41% of the world.
