Silicon Carbide Sintered Powder is a high-purity silicon carbide powder specifically prepared for the production of sintered silicon carbide ceramics and related advanced ceramic components. It generally consists of finely controlled SiC particles with carefully engineered particle size distribution, purity, morphology, and sintering characteristics. The powder may be formulated with sintering additives to promote densification and improve mechanical or thermal performance during pressureless sintering, reaction-assisted sintering, or other ceramic processing routes. It is mainly used to manufacture wear-resistant components, semiconductor processing parts, high-temperature components, seals, bearings, and other precision ceramic products.

The upstream industry provides silicon carbide raw materials, high-purity carbon sources, processing additives, sintering aids, and auxiliary chemicals. The midstream industry performs synthesis, purification, crushing, classification, surface treatment, additive formulation, drying, and quality control to produce sintering-grade silicon
