Sodium Thiosulphate Introduction

“Sodium Thiosulphate” is colorless crystalline chemical compound soluble with efflorescent substance which get easily dissolve in water. Industrially it is formed as liquid waste of sodium sulfide or sulfur dye. Its main applications include iodometry, photographic processing, medical applications and gold extraction. Sodium thiosulphate is used as calciphylaxis treatment in hemo dialysis.Sodium thiosulphate is used for measuring the oxygen content in water, for estimating concentrations of chemical compounds such as hydrogen peroxide in a solution and to estimate the chlorine content in bleaching powder and water during iodometery. In photography, sodium thiosulphate is used for the processing of photographic paper and photographic films. In the gold extraction industry, sodium thiosulphate is used in the process of gold cyanidation for separating gold complex from ore slurry. In the medical industry, sodium

thiosulphate is used as an antidote for cyanide poisoning, in the treatment of calciphylaxis in the patients suffering from end-stage renal disease, for managing extravasations during the chemotherapy process, in the measurement of the renal glomerular filtration rate and for measuring the volume of extracellular body fluid
