According toStratistics MRC, the Global Aircraft Ground Handling System Market is growing at a CAGR of 9% during the forecast period. Some of the key factors propelling the market growth are increase in the number of airports and airlines, various technological advancements and infrastructural up gradation. However, high initial investment, where most airlines prefer dealing with just one aircraft ground handling system provider for a particular flight and this requires a significant amount of money results in hindering the growth of the market.

Aircraft ground handling systems aid in various operations toreduce ground time and improve aircraft productivity. Ground handling management deals with very complex tasks on a day-to-day basis and emphasizes on improving the time efficiency of ground operations so as toavoid delays caused by aircraft. Advanced aircraft ground handling systems simplify tasks for ground handlers and ensure operational efficiency. They also enable airlines tooffer effective and efficient customer services as well as tomanage overall costs. These systems also aim toincrease passenger flow while offering a secure and rapid check-in process.

Based on technology, Aircraft Conventional GHS segment is projected tobe the growing segment due tothe numerous technological innovations that result in the development of economical equipment that consumes lesser fuel and enhanced performance.

By geography, the Asia Pacific provides potential growth opportunities during the forecast period. Since aviation agencies are undertaking strong initiatives todevelop new airport terminals tocombat the increasing passenger traffic.
