A solar collector for heat production is a device that absorbs solar energy and converts it into thermal energy. It is commonly used for hot water supply, heating and industrial heating. It captures solar radiation through the heat-absorbing material inside the collector and converts it into thermal energy, which is then transferred to the medium that needs to be heated through a fluid conduction system. This type of collector has the advantages of high efficiency, environmental protection, and renewable energy, and is widely used in residential, commercial and industrial fields for thermal energy needs.
