Abstracts

Floating Liquefied Natural Gas (FLNG) business has been witnessing a rapid growth since 2005 and has now emerged as one of the leading destinations for most of the oil and gas companies. Building on its strategic advantages of low cost, low price and ability to capitalize stranded reserves, most companies and countries are opting for FLNG. Latest developments in the technology are leading to construction of a large number of fleet (or barges) that can sail (or towed) to offshore gas discoveries, extract gas, liquefy it and offload the LNG to tankers for shipping to end-markets.

To ensure that the LNG companies don't fall behind in the race to invest in FLNG and to ensure that their investments are diverted to right locations, LNGReports have come up with a brand new report on FLNG-"Global FLNG (Floating LNG) Development and Outlook to 2015- The new investment Destination".

In addition to introducing you to different technologies, different FLNG facilities and components, the report allows you to identify the prospects of market through planned investments and capacity outlooks. The report enables you to identify key markets, companies, technologies and facilities being used in global and regional FLNG industry. The report is designed in a user friendly style and assumes the reader doesn't have a prior knowledge of FLNG technologies and concepts.
