The global Tank Monitoring System market size is predicted to grow from US$ 1027 million in 2025 to US$ 1640 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

A tank monitoring system is a network of sensors, instruments, and software that collects and analyzes data about the condition and contents of a storage tank. This data can be used to monitor the tank's level, temperature, pressure, and other critical parameters. Tank monitoring systems are used in a variety of industries, including oil and gas, chemicals, food and beverage, and pharmaceuticals.

The Tank Monitoring System industry is witnessing prominent trends of accelerated digitalization and intelligence, with core technologies such as 5G, AI, edge computing, and digital twin deeply integrated to evolve from single-parameter monitoring to multi-source data fusion, predictive maintenance, and full-lifecycle management, while policy-driven rigid demands from stricter global industrial safety and environmental regulations (e.g., mandatory requirements for leakage detection, VOCs monitoring, and data networking) and the booming new energy industry (such as hydrogen storage tanks and LNG facilities) are reshaping the market landscape. Key opportunities lie in the massive demand for intelligent transformation of existing tanks in petrochemical, energy, and hazardous chemical sectors, the growing infrastructure construction needs in emerging markets including 'Belt and Road' countries and GCC nations, the rise of innovative business models like 'Monitoring as a Service (MaaS)', and the surging demand for high-precision monitoring solutions in new energy scenarios such as green hydrogen and offshore wind power. However, the industry also faces notable challenges: fragmented industry standards leading to compatibility issues between systems and existing DCS/SIS platforms, prominent data security risks (e.g., vulnerabilities in monitoring

equipment that may cause physical and environmental damage), technical bottlenecks in sensor stability and false alarm control under extreme environments (corrosion, high temperature, high pressure), high initial investment and maintenance costs for small and medium-sized enterprises, and difficulties in localized compliance and technical adaptation in international markets.
