Thromboresistant coatings are specialized surface treatments applied to medical devices and implants, such as stents, catheters, and vascular grafts, to reduce the risk of blood clot formation. These coatings are designed to mimic the natural anti-thrombogenic properties of blood vessels, minimizing platelet adhesion and activation. Commonly made from biocompatible materials like heparin, hydrogels, or synthetic polymers, they enhance the safety and effectiveness of devices used in cardiovascular and other blood-contact applications. By preventing thrombosis, these coatings improve patient outcomes and extend the functionality of medical devices.

United States market for Thromboresistant Coatings is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
