Abstracts

Global LNG markets have evolved strongly over the last decade. With declining construction and operational costs, the spread of LNG markets is rising rapidly. Robust natural gas demand coupled with supply diversity advantages are resulting in an increased number of countries participating in world LNG trade. Between 2010 and 2015, 21 new countries are expected to start LNG trading, providing a strong scope for companies existing or planning to enter LNG market.

Entry of these markets is expected to result in diversification of global LNG market and growth in trade volumes. However, the price bases will not alter in the near future. On one hand, the industry provides a larger scope of investments for new entrants and existing players but on the other hand, it can reduce the domination of the existing majors.

To evaluate the pros and cons of entering these markets and making contracts with companies in these countries, LNGReports has come up with the brand new report "Outlook of Future LNG Markets- Analysis and Forecasts of Upcoming 20 Potential LNG Markets". The report evaluates each of these markets through new innovative tools like benchmarking and positioning map. Further, through information on planned investments and market structures, the report gives you a complete insight into 21 evolving LNG markets
