Abstracts

The global Truck-Mounted Aerial Work Platform (AWP) market size is predicted to grow from US$ 1150 million in 2025 to US$ 1729 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

In 2025, global truck-mounted aerial work platform production reached approximately 10685 units, the average price is 110 usd/unit. Truck-mounted aerial work platform is a kind of mobile engineering vehicle which integrates aerial work platform installed on special chassis or truck of automobile. It combines the mobility of the vehicle and the lifting function of the aerial platform, can quickly reach the working site, and safely and efficiently lift personnel, tools and materials to the specified height for installation, maintenance, cleaning and other operations, widely used in electric power, municipal, garden, communication, fire rescue and construction and other fields.

Market Concentration and Key Players:

Internationally, the market concentration degree of vehicle-mounted aerial work platform is relatively high, mainly concentrated in developed countries such as Europe and America. For example, large manufacturers such as PALFINGER and KLUBB; from the domestic point of view, there is still a lot of room for development of vehicle-mounted aerial work platform.

Manufacturing Processes and **Market Trends:**

The manufacturing process of vehicle-mounted aerial work platform begins with the selection and restructuring of special vehicle chassis, and the core is the design and manufacturing of upper part, including telescopic arm or folding arm structure made of

high strength steel, which ensures its bearing capacity and movement accuracy through fine machining, welding and heat treatment. The key hydraulic and electric control systems are integrated synchronously, involving the installation and commissioning of oil cylinders, pump valves, sensors and control circuits to achieve smooth lifting, precise leveling and safety interlocking of the platform. In the final assembly stage, the completed upper assembly shall be firmly combined with the chassis, and comprehensive pipelines and lines shall be arranged. Each equipment must undergo strict factory test to verify its stability under maximum operating height, safety performance of each action and effectiveness of emergency device.

Its market trend is closely related to the growth of infrastructure maintenance and urban management demand, and its application in power grid operation and maintenance, municipal engineering and emergency rescue continues to deepen. Motorization and intellectualization are the clear direction. The products with pure electric chassis and electric drive are favored in urban operation due to zero emission and low noise, and the intelligent control and remote management functions are becoming more and more popular. At the same time, the pursuit of higher efficiency and safety promotes the optimization of boom design and the application of lightweight materials, while compact and multifunctional products for narrow space operation are constantly emerging to meet the diversified needs of the market.
