The global Universal Power Over Ethernet Device market size is predicted to grow from US$ 674 million in 2025 to US$ 871 million in 2031; it is expected to grow at a CAGR of 4.4% from 2025 to 2031.

A Universal Power over Ethernet (UPOE) device is any networked device that is powered through a UPOE connection, using an Ethernet cable to receive both power and data. UPOE devices are designed to operate with up to 60 watts of power, which is higher than the standard Power over Ethernet (PoE) offerings. This capability allows UPOE devices to support a wide range of equipment, including high-power devices like IP cameras, VoIP phones, wireless access points, and even small networked appliances. UPOE simplifies installations by eliminating the need for separate power cables, making it ideal for enterprise and industrial networking environments.
