The UV-Curing Rehabilitation Equipment is an advanced technical device for trenchless pipeline repair. It operates on the principle of initiating a photochemical reaction in photosensitive resin through ultraviolet (UV) light irradiation at a specific wavelength, enabling rapid curing and shaping of the resin-impregnated hose inside the pipeline. The equipment comprises a high-energy UV light source module capable of delivering stable and adjustable UV light intensity, a precise control system for accurately setting lighting parameters and the curing process, and a hose delivery and positioning system to ensure the hose reaches the repair site accurately. Through the coordination of these systems, it leverages the efficiency and controllability of the photocuring reaction to achieve rapid and precise repair of pipeline defects, serving as a crucial technological support in modern pipeline repair.

United States market for UV-Curing Rehabilitation Equipment is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
