Abstracts

The global In Vitro Fertilization (IVF) Equipment market size is predicted to grow from US$ 260 million in 2025 to US$ 489 million in 2032; it is expected to grow at a CAGR of 9.6% from 2026 to 2032.

In vitro fertilization (IVF) equipment is a medical device used in assisted reproductive technology to perform in vitro fertilization and embryo culture processes in a laboratory setting. Increase in infertility problems, technological advancement, increase in fertilization rate and embryo development rate, personalized medical needs, and changes in legal policies are all important factors driving the development of IVF equipment.

The global IVF equipment market has grown rapidly in recent years, driven by rising infertility rates (about 15%-20% of the world's reproductive population is affected), the trend of late marriage and late childbearing, and the popularization of assisted reproductive technology (ART). The competitive landscape is dominated by multinational companies, such as Vitrolife (Sweden), CooperSurgical (USA) and Cook Medical (USA), which dominate with high-end equipment such as embryo incubators and micromanipulators; local companies in emerging markets such as China and India are accelerating the substitution of imported products through cost-effective strategies.

In the regional market, North America and Europe account for more than 50% due to high medical expenditures and policy support (such as medical insurance covering IVF), while the Asia-Pacific region has become a growth engine due to its large population base and surging demand for infertility treatment.

Technology trends focus on automation (AI embryo screening system) and microfluidic

chips (reducing reagent usage), while low-cost portable devices (such as micro incubators) help primary care penetration.

Challenges focus on ethical disputes, high treatment costs and strict supervision (such as FDA, CE certification), but with breakthroughs in gene editing (CRISPR) and personalized culture fluid research and development, market potential will be further released.
