Abstracts

The global non-datacom/non-telecom optical communication market size is estimated at USD 0.64 billion in 2026 and is projected to reach USD 2.34 billion by 2035, growing at a CAGR of 15.6% from 2026 to 2035. The non-datacom/non-telecom optical communication market is primarily driven by the increasing integration of optical communication components into specialized systems that require high-speed, reliable, and interference-resistant data transmission. Demand is expanding across space missions, underwater platforms, industrial equipment, aerospace and defense systems, and advanced medical equipment, where optical connectivity can address the performance requirements of complex electronic architectures. The growing deployment of autonomous and remotely operated platforms is further creating requirements for reliable data exchange in challenging operating environments. As system designers increasingly incorporate optical connectivity into specialized equipment, the application base for optical communication components is broadening. This expansion across diverse non-datacom and non-telecom applications is expected to sustain component demand throughout the forecast period.

“Optical transceivers dominate the non-datacom/non-telecom optical communication market, by component.”

Optical transceivers dominate the market because they combine transmitter and

receiver functions within a single integrated module, making them a core interface between optical links and electronic equipment. Their use extends across space optical communication, free-space optical systems, underwater optical links, LiFi/VLC systems, mission-critical fiber networks, and intra-system optical interconnects. This broad applicability allows transceivers to be incorporated across a wider range of system architectures than individual transmitters, receivers, or supporting components. Their integration into both new equipment and communication upgrades further sustains demand, enabling optical transceivers to maintain their dominant market position throughout the forecast period.

“Healthcare & medical device applications are expected to register the highest CAGR during the forecast period.”

Healthcare & medical devices are expected to register the highest CAGR during the forecast period, primarily due to the increasing integration of optical communication into advanced medical equipment that requires high-speed internal data transfer and reliable signal integrity. Medical imaging systems such as magnetic resonance imaging (MRI), computed tomography (CT), positron emission tomography (PET), and high-end ultrasound increasingly incorporate optical interconnects to support communication between processing, imaging, and display modules. The growing complexity of medical equipment and increasing data volumes generated by advanced imaging technologies are creating greater requirements for optical connectivity. As manufacturers adopt higher-performance architectures, demand for optical communication components in healthcare & medical devices is expected to grow rapidly.

“Asia Pacific is expected to register the highest CAGR during the forecast period.”

Asia Pacific is expected to register the highest CAGR during the forecast period, primarily due to the expansion of industrial automation, advanced manufacturing, and specialized electronic systems across the region. Increasing investment in automated production facilities and high-performance equipment is increasing demand for reliable optical connectivity within and between industrial systems. The region is also strengthening its capabilities in aerospace, transportation, energy, and marine technologies, providing additional applications for optical communication components. In addition, the growing manufacturing base for sophisticated electronic and optical equipment supports faster integration of optical technologies into new systems. These developments are expected to accelerate component adoption across Asia Pacific

during the forecast period.

Extensive primary interviews were conducted with key industry experts offering non-datacom/non-telecom optical communication solutions to determine and verify the market size for various segments and subsegments gathered through secondary research. The breakdown of primary participants for the report is provided below:

By Company Type: Tier 1–40%, Tier 2–35%, and Tier 3–25%

By Designation: C-level–40%, Directors–45%, and Others–15%

By Region: North America–41%, Europe–26%, Asia Pacific–28%, and RoW–5%

The report profiles key players in the non-datacom/non-telecom optical communication market with their respective market ranking analysis. Prominent players profiled in this report are Exail (France), Broadcom (US), Schweitzer Engineering Laboratories, Inc. (US), Amphenol Aerospace (US), and Smiths Interconnect (UK).

Apart from this, MPB Communications Inc. (Canada), Corning Incorporated (US), Coherent Corp. (US), TE Connectivity (Ireland), among others, are among the few other companies in the non-datacom/non-telecom optical communication market.

Research Coverage

This research report categorizes the non-datacom/non-telecom optical communication market based on system type, component, application, and region. The report describes the major drivers, restraints, challenges, and opportunities in the non-datacom/non-telecom optical communication market and forecasts the same through 2035. It also includes leadership mapping and analysis of all companies in the non-datacom/non-telecom optical communication market ecosystem.

Key Benefits of Buying the Report

The report will help the market leaders/new entrants in this market with information on the closest approximations of the numbers for the overall non-datacom/non-telecom optical communication market and the subsegments. This report helps stakeholders understand the competitive landscape, gain insights to better position their businesses, and plan suitable go-to-market strategies. The report also helps stakeholders understand the market pulse and provides information on key market drivers, restraints,

+357 96 030922

challenges, and opportunities.

The report provides insights into the following pointers

Analysis of key drivers (rising space mission data volumes, mission-critical communication reliability requirements, growing underwater data-transfer requirements, and increasing scientific exploration data volumes), restraints (atmospheric turbulence disrupts optical links, and water absorption reduces optical signal strength), opportunities (optical inter-satellite link expansion, and space-to-ground optical communication deployment), and challenges (high optical system and engineering costs, and specialized component sourcing requirements)

Product Development/Innovation: Detailed insights into upcoming technologies, research & development activities, and new product & service launches in the non-datacom/non-telecom optical communication market

Market Development: Comprehensive information about lucrative markets–the report analyzes the non-datacom/non-telecom optical communication market across varied regions.

Market Diversification: Exhaustive information about new products & services, untapped geographies, recent developments, and investments in the non-datacom/non-telecom optical communication market

Competitive Assessment: In-depth assessment of market shares, growth strategies, and service offerings of leading players, such as Exail (France), Broadcom (US), Schweitzer Engineering Laboratories, Inc. (US), Amphenol Aerospace (US), and Smiths Interconnect (UK), in the non-datacom/non-telecom optical communication market
