SUMMARY

3D Printing of Metals, also called metal additive manufacturing, can produce metallic products through three - dimensional and printing technology. Now it is widely used in automotive industry, aerospace industry and medical industry. 3D printing of metals works by laying down metal powder. A high powered laser then melts that powder in certain precise locations based on a CAD file. Once one layer is melted, the printer will place another layer of metal powder on top, and the process repeats until an entire object is fabricated.

The global 3D Printing of Metals market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
