SUMMARY

An acoustic camera is an imaging device used to locate sound sources and to characterize them. It consists of a group of microphones — also called microphone array — that are simultaneously acquired to form a representation of the location of the sound sources. With this method the sound signal is shown and also a sequence of acoustic images can be acquired as acoustic videos are generated at same time.

The global Acoustic Camera market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
