### SUMMARY

Anticoagulants, commonly referred to as blood thinners, are substances that prevent or reduce coagulation of blood, prolonging the clotting time. Some of them occur naturally in blood-eating animals such as leeches and mosquitoes, where they help keep the bite area unclotted long enough for the animal to obtain some blood. As a class of medications, anticoagulants are used in therapy for thrombotic disorders. Oral anticoagulants (OACs) are taken by many people in pill or tablet form, and various intravenous anticoagulant dosage forms are used in hospitals. Some anticoagulants are used in medical equipment, such as test tubes, serum-separating tubes, blood transfusion bags, and dialysis equipment.

The global Anticoagulants market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
