SUMMARY

BCG Vaccine is a vaccine primarily used against tuberculosis. Tuberculosis is a serious infection, which affects the lungs and sometimes other parts of the body, such as the bones, joints and kidneys. The bacille Calmette-Guérin (BCG) vaccine has existed for 80 years and is one of the most widely used of all current vaccines, reaching >80% of neonates and infants in countries where it is part of the national childhood immunization programme. Besides, BCG Vaccine is also used to treat a certain type of bladder cancer. Bladder cancer is the growth of abnormal or cancerous cells on the inner lining of the bladder wall. BCG helps prevent the cancer from coming back in the bladder lining, and also reduces the risk of it becoming invasive.

The global BCG Vaccine market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
