### SUMMARY

A biologic is a medicine made using a living system, and historically this was often an animal. Most products being developed as biosimilars are recombinant proteins, or proteins derived from genetically engineered DNA. In this report is a biologic defined as proteins, peptides, hormones or antibodies drugs production by bio-engineered technology, but does not include a vaccine. A biosimilar in this report is a biologic medical product which is copy of an original product that is manufactured by a different company. Biosimilars are officially approved versions of original “innovator” products, and can be manufactured when the original product's patent expires.

The global Biologics and Biosimilars market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
