### SUMMARY

A book paper (or publishing paper) is a paper that is designed for the publication of printed books, magazines and so on. Traditionally, book papers are off-white or low-white papers (easier to read), are opaque to minimise the show-through of text from one side of the page to the other, and are (usually) made to tighter caliper or thickness specifications, particularly for case-bound books. Typically, books papers are light-weight papers 60 to 90 g/m<sup>2</sup> and often specified by their caliper/substance ratios (volume basis). For example, a bulky 80 g/m<sup>2</sup> paper may have a caliper of 120 micrometres (0.12 mm) which would be Volume 15 (120?10/80), whereas a low bulk 80 g/m<sup>2</sup> may have a caliper of 88 micrometres, giving a volume 11. This volume basis then allows the calculation of a book's PPI (printed pages per inch), which is an important factor for the design of book jackets and the binding of the finished book.

The global Book Paper market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
