### SUMMARY

Anterior interbody cages are titanium cylinders that are placed in the disc space. The cages are porous and allow the bone graft to grow from the vertebral body through the cage and into the next vertebral body. The cages offer excellent fixation, so most patients do not need additional instrumentation (e.g. pedicle screws) or post-operative back braces for support.

The global Cervical Interbody Fusion Cages market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
