SUMMARY

The Computer on Module (CoM), which is sometimes referred to as a System on Module, is an alternative to single board computers for embedded systems offering a more flexible and contoured solution. It is designed to plug into a carrier, or base board, and is generally a small processor module with a CPU and standard I/O capability. The complex effort associated with designing a CPU subsystem is avoided by using CoM functionality and a custom base board.

The global Computer On Module (COM) market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
