### SUMMARY

Daylight fluorescent pigments are luminescent materials that require no artificially generated energy to reflect colored light and to give off fluorescent light. Fluorescent pigments are composed of dyed organic polymers that are formulated to be solvents for the fluorescence dyestuff. In contrast to ordinary colors, light emitted from a fluorescent color adds to the light returned by simple reflection to give the glow characteristic of daylight-fluorescent materials.

The global Daylight Fluorescent Pigments market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
