SUMMARY

District energy, both heating and cooling, tie together the energy generating sources in a city with buildings and facilities having a need of heating and/or cooling. Instead of each building having its own heating or cooling system, the energy is delivered to several buildings in a larger area from a central plant. The water based distribution system guarantees that heat and cooling arrive safely to the end users.

The global District Heating and Cooling market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
