SUMMARY

Electric Heater converts electricity into heat through the process of resistive or Joule heating.A typical Electric heating element is usually a coil, ribbon (straight or corrugated), or strip of wire that gives off heat much like a lamp filament. When an electric current flows through it, it glows red hot and converts the electrical energy passing through it into heat, which it radiates out in all directions
The global Electric Heater market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
