### SUMMARY

The electron microscope is a type of microscope that uses a beam of electrons to create an image of the specimen. It is capable of much higher magnifications and has a greater resolving power than a light microscope, allowing it to see much smaller objects in finer detail. They are large, expensive pieces of equipment, generally standing alone in a small, specially designed room and requiring trained personnel to operate them.

The global Electron Microscope market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
