SUMMARY

Electronic braking system (EBS) is an automobile brake technology that automatically varies the amount of force applied to each of a vehicle's brakes, based on road conditions, speed, loading, etc. Always coupled with anti-lock braking systems, EBS can apply more or less braking pressure to each wheel in order to maximize stopping power whilst maintaining vehicular control. Typically, the front end carries the most weight and EBS distributes less braking pressure to the rear brakes so the rear brakes do not lock up and cause a skid.

The global Electronic Braking Systems (EBS) market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
