SUMMARY

External fixation systems use a stabilizing metal frame with bars connected to pins that are drilled into bones above and below the fracture site. The system allows the surgeon to reposition the bone fragments over time to help them heal properly. External fixation systems are typically used in conjunction with internal fixation or other types of treatment, and are not usually a solution to fracture management.

The global External Fixation Systems market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
