SUMMARY

Horizontal directional drilling (HDD), commonly called directional boring, is a steerable trenchless method of installing underground pipes, conduits and cables in a shallow arc along a prescribed bore path by using a surface-launched drilling rig, with minimal impact on the surrounding area. Directional boring is used when trenching or excavating is not practical. It is suitable for a variety of soil conditions and jobs including road, landscape and river crossings.

The global Horizontal Directional Drilling market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
