SUMMARY

A stepper motor or step motor or stepping motor is a brushless DC electric motor that divides a full rotation into a number of equal steps. The motor's position can then be commanded to move and hold at one of these steps without any position sensor for feedback (an open-loop controller), as long as the motor is carefully sized to the application in respect to torque and speed. Stepper motors are available in three basic types; which are permanent magnet, variable reluctance and hybrid.

The global Hybrid Stepper Motors market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
