SUMMARY

LEDs or Light Emitting Diodes are semiconductor devices capable of generating light when a voltage is applied to their terminals; this phenomena is called electroluminescence. Unlike the filament bulb which generates much heat these diodes provide a cold light source and depending on which semiconductor material is used can generate different colors of light.

The global Illumination of Microscope market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
