SUMMARY

Refractories are heat-resistant materials that constitute the linings for high-temperature furnaces and reactors and other processing units. In addition to being resistant to thermal stress and other physical phenomena induced by heat, refractories must also withstand physical wear and corrosion by chemical agents. ASTM C71 defines refractories as 'non-metallic materials having those chemical and physical properties that make them applicable for structures, or as components of systems, that are exposed to environments above 1,000 °F (811 K; 538 °C)'.

The global Industrial Refractory Materials market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
