### SUMMARY

Interferometers are investigative tools used in many fields of science and engineering. They are called interferometers because they work by merging two or more sources of light to create an interference pattern, which can be measured and analyzed; hence 'Interfere-ometer'. The interference patterns generated by interferometers contain information about the object or phenomenon being studied. They are often used to make very small measurements that are not achievable any other way.

The global Interferometer market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
