### SUMMARY

Intravenous Solutions is the infusion of liquid substances directly into a vein. Therapies administered intravenously are often included in the designation of specialty drugs. Intravenous infusions are commonly referred to as drips because many systems of administration employ a drip chamber, which prevents air from entering the blood stream (air embolism), and allows an estimation of flow rate.

The global Intravenous Solutions market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
