SUMMARY

Intumescent Coatings are coatings that react under the influence of fire, swelling to many times their original thickness and producing an insulating foam-like coating or "char" which protects the substrate. Intumescent Coatings provide an appearance similar to that of a paint finish. At ambient temperatures, they remain stable. However, in a fire situation, the increase in temperature causes a chemical reaction.

The global Intumescent Coatings market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
