SUMMARY

Lithium-ion batteries are mainly made up of four major components: anode material, cathode material, electrolyte, separator. The electrolyte is one of the key raw materials of lithium-ion batteries, it is the 'blood' of lithium ion batteries, between the battery positive and negative playing a role of transporting energy, guaranteeing the lithium-ion batteries to have high voltage, high specific energy and other advantages. It accounts for about 5% -12% of the cost of lithium-ion battery production costs. Usually the electrolyte is prepared by the high purity organic solvent, electrolyte, additive and other materials under certain conditions and certain proportion.

The global Lithium ion Battery Electrolyte market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
