SUMMARY

Luffing jib tower cranes, which are a type of top-slewing crane, have an angled rather than horizontal jib. Unlike other tower cranes which have a trolley that controls the lateral movement of the load, luffing jib cranes move their load by changing the angle of the jib. The cranes are utilized primarily in urban areas where space is constrained or in situations where several cranes are installed close together.

The global Luffing Jib Tower Crane market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
