### SUMMARY

Manual Torque Multipliers is a tool used to provide a mechanical advantage in applying torque to turn bolts, nuts or other items designed to be actuated by application of torque, such as the actuation of valves, particularly where there are relatively high torque requirements. Torque multipliers can also be used to ease manual tube expansion in drums of water tube boilers or to expand tubes in restricted space. The manually operated torque multipliers made are ideal for applications without a third-party power source – an effective tool for loosening and tightening bolts that is suitable for use anywhere and at any time.

The global Manual Torque Multipliers market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
