SUMMARY

Metallocene Polyethylene is prepared by means of metallocene catalysts, usually including copolymers. Metallocene polyethylene has a relatively narrow molecular weight distribution, exceptionally high toughness, excellent optical properties and a uniform comonomer content. Because of the narrow molecular weight distribution it behaves less pseudoplastic (especially under larger shear rates). Metallocene polyethylene has a low proportion of low molecular weight (extractable) components and a low welding and sealing temperature.

The global Metallocene Polyethylene market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
