SUMMARY

Alternative proteins, such as plant-based meat substitutes and edible insects, provide a substantial amount of protein but require less natural inputs to produce than the most common protein sources, meat and fish. Composed of different sequences of amino acids, proteins are found in almost all whole foods. Protein is responsible for building lean body tissue and providing the elements needed for digestive enzymes. Certain plant-based proteins offer functionality but pose flavor challenges. Pea protein is becoming more popular in part because of its neutral flavor.

The global Neutral Alternative Protein market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
