SUMMARY

Newborn screening is the practice of testing every newborn for certain harmful or potentially fatal disorder that isn't otherwise apparent at birth. With a simple blood test, doctors often can tell whether newborns have certain conditions that eventually could cause problems. Although these conditions are rare and most babies are given a clean bill of health, early diagnosis and proper treatment sometimes can make the difference between lifelong impairment and healthy development.

The global Newborn Screening Instruments market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
