SUMMARY

An optical isolator, or optical diode, is an optical component which allows the transmission of light in only one direction. It is typically used to prevent unwanted feedback into an optical oscillator, such as a laser cavity. The operation of the devices depends on the Faraday Effect (which in turn is produced by magneto-optic effect), which is used in the main component, the Faraday rotator.

The global Optical Isolators market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
