SUMMARY

3D Optical Surface Profilers(Profilometers) is a kind of profilometer using Non-contact technology. They are typically built on advanced optical microscopes, providing the dual advantages of excellent imaging and no contact with the surface being measured. They use a variety of light sources, usually using high-brightness LEDs, to illuminate the sample and sophisticated cameras to capture the images which are then converted into height information using techniques such as confocal microscopy or interferometry.

The global Optical Surface Profilers (Profilometers) market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
