### SUMMARY

A palletizing machine is a machine which provides automatic means for stacking cases of goods or products onto a pallet. Manually placing boxes on pallets can be time consuming and expensive; it can also put unusual stress on workers. In row-forming palletizing applications loads are arranged on a row forming area and then moved onto a different area where layer forming takes place. This process repeats until a full layer of goods and products are configured to be placed on a pallet.

The global Palletizing Machine market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
