SUMMARY

Panel saw is a machine with a sliding table which is used to cut large sheet materials into smaller rectangular sections and pieces, often as part of an initial sizing process. It consists of a circular saw and an upright framework that supports the work piece and a track that the circular saw travels along. Unlike a table saw where the work piece is moved past the cutting blade, with a panel saw the operator moves the circular saw across the work piece, with the work piece fixed in place.

The global Panel Saw market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
