### SUMMARY

Plasma welding is very similar to TIG welding as the arc is formed between a pointed tungsten electrode and the workpiece. However, by positioning the electrode within the body of the torch, the plasma arc can be separated from the shielding gas envelope. Plasma is then forced through a fine-bore copper nozzle which constricts the arc. The global Plasma Welding Machines market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
