SUMMARY

Power over Ethernet (PoE) uses Ethernet cable networks to transmit power and data through one cable. Ethernet is a tested and trusted solution for transmitting data and low-voltage direct current (DC) power for everything from phone systems to cameras. PoE LED lights use the DC power from the Ethernet cable and eliminate the regularly required alternating current (AC) to DC conversion within each luminaire. As a result, less power is lost, making PoE lighting more energy efficient.

The global Power Over Ethernet (POE) Lighting market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
