SUMMARY

Normally, DNA is transcribed, or copied, to RNA and then translated to protein. Reverse transcriptase copies RNA back to DNA. Think of it as a car moving down a one-way street. Normally traffic only moves in one direction. But then, someone from out of town is driving the opposite way! Reverse transcriptase drives the opposite way in molecular processes in cells, converting RNA back to DNA.

The global Reverse Transcriptase market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
