SUMMARY

A rheometer is a device used to measure rheological properties in which a liquid, suspension or slurry flows in response to applied forces such as the viscosity, plasticizing rate, power and etc.. It is used for those fluids which cannot be defined by a single value of viscosity and therefore require more parameters to be set and measured than is the case for a viscometer.

The global Rheometer market is expected to reach xxx Million USD by 2025, with a CAGR of xx% from 2020 to 2025.
